

- You will use the <https://images-api.nasa.gov> api. To search for photos.
- User enters a search term and on button click - you will access the API and display a summary of the search results and the images returned from the api.
- You will display the returned results in groups of 12, to see the next group of pictures, in the search results you can click the see more link on the bottom of the page.
- When you click or hover over any picture its description will appear over the image

Marks will be based on:

- proper use of jquery to query the api
- Use of jquery to display the results in the dom
- Use of jquery to display the description
- Use of jquery to paginate the results
- Good UX and CSS styling
